- FREE Institute for educators interested in translating regional issues in ecological research and technology to the classroom.
- Workshops highlighting 6th–12th grade student engagement in topics such as conservation genetics, native plant propagation, remote sensing, service learning, field ecology, water, soil, and atmospheric science.
- Field modules correlating environmental science, ecology and natural resources with CA state standards and the EEI.
- How to effectively include Eco-STEM topics in environmental service learning projects
- Networking with professionals and scientists in STEM fields.
